Clarification:

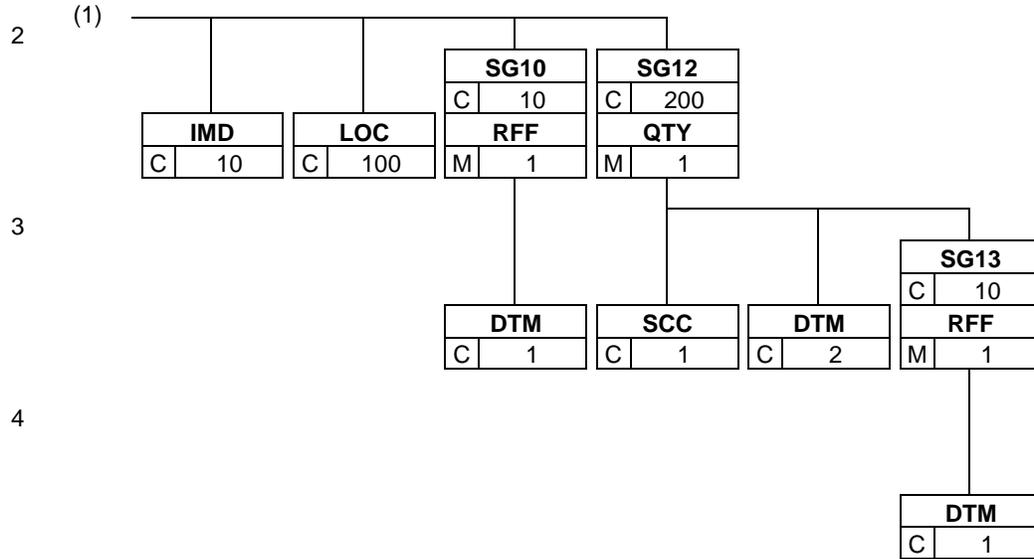

- 1/0010 A service segment starting and uniquely identifying a message. The message type code for the Delivery schedule message is DELFOR. Note: Delivery schedule messages conforming to this document must contain the following data in segment UNH, composite S009: Data element 0065 DELFOR 0052 D 0054 96A 0051 UN
- 1/0020 A segment for the unique identification of the delivery schedule document, by means of its name and its number.
- 1/0030 A segment specifying the date, and when relevant, the time/period of the beginning and ending of the validity period of the document. The DTM must be specified at least once to identify the Delivery Schedule document date. The date/time/period segment within other Segment group should be used whenever the date/time/period is logically related to another specified data item.
- 1/0070 A group of segments identifying names, addresses, locations, and contacts relevant to the whole Delivery Schedule.
- 1/0080 A segment for identifying names and addresses and their functions relevant for the whole Delivery Schedule. Identification of the seller and buyer parties is recommended for the Delivery Schedule message. Exception: the identification of the recipient of the goods must be given in the NAD segment in the detail section when required. It is recommended that where possible only the coded form of the party ID should be specified, e.g. the buyer and seller are known to each other, thus only the coded ID is required. The consignee or delivery address may vary and would have to be clearly specified, preferably in structured format.
- 1/0100 A group of segments to identify people, functions, or departments and appropriate numbers to whom communication should be directed.
- 1/0110 A segment to identify the person, function, or department to whom communication should be directed.
- 2/0130 A service segment placed at the start of the detail section to avoid segment collision. The detail section consists of two main Segment groups: Segment group 4 and Segment group 18. The use of one of the Segment groups assumes that the other group will not be used. There are two methods of conveying Product Delivery forecast information. First method is by delivery point (Segment groups 4-17), the second is product driven (Segment group 18-31).
- 2/0140 A group containing delivery names and addresses, related information and details of line items to be consigned to the delivery points.
- 2/0150 A segment for identifying names and addresses and their functions relevant to the delivery point. Methods of conveying Product Delivery forecast information. First method is by delivery point (Segment groups 4-17), the second is product driven (Segment group 18-31). All other segments in this segment group 4 following the NAD segment refer to that delivery point.
- 2/0270 A group of segments providing details of the individual line items for the specified delivery point.
- 2/0280 A segment identifying the details of the product or service to be delivered, e.g. product identification. All other segments in the detail section following the LIN segment refer to the line item.
- 2/0290 A segment providing additional product identification.
- 2/0300 A segment for describing the product or the service to be delivered. This segment should be used for products that cannot be identified by a product code or article number.
- 2/0350 A segment identifying a specific location to which products, as specified in the LIN-Segment group, should be delivered.
- 2/0410 A group of segments giving references related to the line item and where necessary, their dates.
- 2/0420 A segment for identifying documents relating to the line item, e.g. a contract and its appropriate line item.
- 2/0430 Date/time of the referred document.
- 2/0470 A group of segments specifying quantity related information for actual delivery, reporting or cumulative quantities and forecast quantities as required for the line item.
- 2/0480 A segment to specify pertinent quantities which may be relating to schedule(s) and/or pattern established in the SCC/DTM segment, e.g. delivery quantity or a specified date.
- 2/0490 A segment specifying the type and status of the schedule being given, and optionally defining a pattern to be established, e.g. firm or proposed delivery schedule for a weekly pattern.
- 2/0500 A segment indicating the date/time/period details relating to the quantity and schedule details in the QTY/SCC segments. This segment may indicate date/time ranges, e.g. start and end dates for a delivery pattern, or delivery window.
- 2/0510 A group of segments for referencing specific product delivery release information and where necessary their date.
- 2/0520 A segment for referencing specific product delivery release information e.g. appointment.
- 2/0530 Date/time of the referred document.
- 3/1220 A service segment placed at the start of the summary section to avoid segment collision.

3/1250 A service segment ending a message, giving the total number of segments in the message and the control reference number of the message.
